
IBM Data Science Module 7 Unit 2 Live session

Learning outcomes:

LO1: Identify machine learning techniques and applications.

LO2: Describe the importance of each process in the life cycle of a machine learning model.

LO3: Differentiate between the work of a data scientist and that of an AI engineer.

LO4: Explore machine learning tools and the Python ecosystem, including the scikit-learn library.

LO5: Explain applications of regression as a supervised learning approach.

LO6: Explain how simple linear regression works.

In this live session, you'll have an opportunity to engage with your tutors and your peers. During the session, you're encouraged to ask questions, share your thoughts, and discuss any relevant topics. These sessions aim to reinforce your understanding and knowledge of applying regression models.

What to expect

In the live session, the tutors will compare the visualization of linear and logistic regressions using real datasets. They will also provide a short code walkthrough using scikit-learn. In the Q&A session, you'll be able to ask any questions that you might have regarding the practice labs in this module.

You can join the session via the Zoom LTI in the navigation bar.

Reminder:

It is important to have earphones and a microphone (and quiet surroundings) to participate in the session. You are advised to log in to the session 10 minutes early to enable your audio and visual settings and to test your connection before the session begins.

For guidance on how best to conduct conversations and interactions during live sessions, please review the live session etiquette guide before the session.
