
IBM Data Science Module 8 Unit 3 Live session (contextual copy)

Learning outcomes:

LO18: Explain the different evaluation techniques for supervised and unsupervised machine learning models.

LO19: Evaluate the performance of classification models on real-world data.

LO22: Review key strategies for model validation and common pitfalls associated with modeling.

In this live session, you'll have the opportunity to engage with your tutors and peers. The purpose of this synchronous session is to provide you with a final opportunity to consolidate all core concepts from the module and reinforce key distinctions and practical strategies for implementing machine learning.

During the session, you're encouraged to ask questions, share your thoughts, and discuss any relevant topics. This session aims to reinforce your understanding and knowledge of techniques and strategies for evaluating supervised and unsupervised ML models.

What to expect

In this live session, the tutors will demonstrate how to build an end-to-end ML pipeline, including data preparation, training, tuning, and evaluation using the scenario and historical rainfall data from the 8.8 Activity. In the Q&A session, you'll be able to ask any questions that you might have regarding the 8.8 Activity (or any other activity) in this module.

You can join the session via the Zoom LTI in the navigation bar.

Reminder:

It is important to have earphones and a microphone (and quiet surroundings) to participate in the session. You are advised to log in to the session 10 minutes early to enable your audio and visual settings and to test your connection before the session begins.

For guidance on how best to conduct conversations and interactions during live sessions, please review the live session etiquette guide before the session.
